Summary

Recent Data Science graduate from University of Malaya with hands-on experience building LLM-powered applications, multi-agent AI systems, and hybrid ML pipelines. Seeking Data Analyst, ML, or AI Engineer roles in Malaysia.

Experience

Data Analyst Intern 04/2022 – 11/2022

Coders Ready India

- Conducted exploratory data analysis (EDA) on a U.S. COVID-19 dataset containing 50,000+ records and 15 features using Python, Pandas, NumPy, Matplotlib, and Seaborn.
- Created time-series and comparative visualizations to identify COVID-19 trends, case surges, mortality patterns, and state-level hotspots.
- Generated actionable insights by analyzing infection and mortality trends across U.S. states and presenting findings through dashboards and reports.

Education

Master of Data Science 10/2024 – 11/2026

University of Malaya Kuala Lumpur, Malaysia

- GPA: 4.0

Bachelor of Science in Aeronautics 08/2019 – 12/2022

Jamia Millia Islamia India

- GPA: 3.9

Skills

Programming: Python, R, SQL

Cloud & Data: GCP, BigQuery, Hadoop, HBase, AWS

Tools: Streamlit, Plotly, Pandas, NumPy, Scikit-learn, XGBoost, SBERT, Power BI, Git, OpenRouter

Soft Skills: Problem Solving, Collaboration, Presentation Skills, Time Management

Projects

GCA Voting Platform – Full-Stack Landing & Voting Web App 07/2026

React, Vite, Tailwind CSS, Supabase, Vercel, OpenRouter

- Designed and shipped a full-stack landing page and 4-step voting flow in a 3-day prototype challenge, using React/Vite/Tailwind on the frontend with Vercel serverless functions and a Supabase (Postgres) backend for vote persistence.
- Built an AI-powered Career Match step using OpenRouter (GPT-4o-mini class model) to suggest ranked employer sectors from a student's course and interests, alongside a soft duplicate-vote detection system for accurate tallying.
- Delivered a password-protected admin dashboard with live vote totals, an employer leaderboard, and a public live-stats endpoint, with Row Level Security locking the database to server-only access.

CSV Insight Agents – AI-Powered Data Analysis Platform 05/2026

Python, Streamlit, LLM, Plotly

- Developed an AI-powered multi-agent analytics platform (Data Quality, Cleaning, Statistics, Visualization, Modeling, and Reporting) that automates end-to-end CSV data analysis, reducing manual analysis effort by approximately 85%.
- Engineered an AutoML pipeline capable of one-click training, comparing, and evaluating multiple classification and regression models using Scikit-learn, XGBoost, and LightGBM, with feature importance analysis and performance metrics generation.
- Integrated GPT-OSS-120B with an interactive Streamlit dashboard to generate natural language business insights, automated reports, predictive analytics, and actionable recommendations from raw datasets.

LLM-Powered Hybrid Movie Recommendation System

08/2025 – 01/2026

Python, XGBoost, LLM, Streamlit

- Built an LLM-powered hybrid recommendation engine using Python, achieving 85%+ accuracy by combining Content-Based Filtering (SBERT), Latent Semantic Analysis (SVD), XGBoost re-ranking, and Reciprocal Rank Fusion (RRF) with weighted scoring (50/25/15/10).
- Integrated GPT-OSS-120B Generative AI to deliver natural language explanations for recommendations, significantly enhancing user interpretability, trust, and explainability of AI-driven decisions.
- Engineered dual-input functionality enabling text-based natural language queries and seed-movie selection, deployed via an interactive Streamlit dashboard with TMDB API integration for real-time poster fetching and dynamic visualizations.

Certifications

- Introduction to AI and Machine Learning on Google Cloud — Google Cloud Skill Boost, May 2025
- Google Cloud Data Analytics — Google Cloud Skill Boost, Feb 2025
- Data Science with Python Course — Coders Ready, Dec 2022
